

**IN THE SPECIFICATION:**

Kindly amend the following paragraphs as indicated below:

[0016]

Figure 1 illustrates a preferred embodiment of a waterfall feature 11 according to the present invention, designed to appeal to the visual senses of persons seated in the main body of water 22 of the portable spa container 20. A narrow elongated spout 13 is mounted in the top rim 15 of the portable spa 20. A bezel 21 smoothes the transition between the spout 13 and top rim 15. A ribbon-shaped flow of continuous water [[17]] 18 is emitted in an arch from the spout 13 into the main body of water 22 in the portable spa container 20.

[0019]

The inlet part of plenum chamber 23 is a separate inlet structure 29 that has a pipe connector 37 connected to a bottom plate 38 having an orifice 39. The bottom plate 38 is sized to fit within the bottom opening of plenum chamber 23. The water inlet 29 fits into and is ~~glued~~ permanently fastened to the walls 24, 26 of the plenum chamber 23. The orifice 39 is chosen so that it is larger in cross-section than the opening of spout 13.

[0024]

Figure 5 illustrates more clearly, in cross-section, the spout portion of the output of plenum chamber 23. The spout 13 is formed from the walls 24, 26 of plenum chamber 23 to create a narrow elongated channel 45 leading from the main chamber 46 and ending in an elongated mouth 14 having a top 17 and a bottom [[18]] 16. The mounting plate 25 is attached to the spout and has a location ridge 47 at the top, and a slot 42 at its bottom with another location ridge 49 beneath.

[0027]

Figure 9 illustrates the use of fiber-optic bundle 53 to provide light to a light source head 43, preferably a flat fiber-optic array which is inserted into the slot 42 from the back side. The slot 42 is attached to the bottom 16 of the spout 13.
